### Report Overview

The market for swine respiratory preparations encompasses a range of veterinary pharmaceuticals and biologics designed to prevent and treat respiratory diseases in pigs, including infections caused by pathogens such as porcine reproductive and respiratory syndrome virus (PRRSV), swine influenza, *Mycoplasma hyopneumoniae*, and *Actinobacillus pleuropneumoniae*. These preparations include vaccines, antibiotics, anti-inflammatory drugs, and immunomodulators, administered via injections, oral solutions, or feed additives. The demand is driven by the high prevalence of respiratory diseases in intensive pig farming systems, where overcrowding and stress increase susceptibility to infections. Growth in global pork consumption, coupled with stricter regulations on antibiotic use, has spurred innovation in vaccine development and alternative therapies. Key markets include North America, Europe, and Asia-Pacific, with China dominating due to its large swine population. Rising biosecurity concerns and the economic impact of disease outbreaks on production efficiency further propel market expansion, though challenges such as vaccine efficacy variability and resistance to antimicrobials persist.
