### Report Overview

The swivel side entry agitator is a specialized industrial mixing device designed for applications requiring high-efficiency agitation in tanks or vessels with limited top access. It features a unique swivel joint mechanism that allows the agitator shaft to enter the vessel from the side at an adjustable angle, enabling optimal positioning for mixing processes while minimizing space constraints. These agitators are commonly used in industries such as chemical processing, pharmaceuticals, food and beverage, and wastewater treatment, where they handle viscous fluids, suspensions, or corrosive materials. The design typically includes a motor, gearbox, sealing system, and impeller configurations tailored to specific mixing requirements, ensuring uniform blending, heat transfer, or suspension of solids. Their side-entry configuration offers advantages over top-mounted agitators by reducing installation complexity in crowded facilities and allowing maintenance without vessel disassembly.
