Report Overview

Teflon Coated Fabrics are textiles that have been treated with a thin layer of Teflon, a synthetic fluoropolymer known for its non-stick properties. This coating is applied to enhance the fabric's resistance to stains, water, and various chemicals. The process involves bonding the Teflon molecules to the fabric fibers, creating a protective barrier that repels liquids and makes cleaning easier. These fabrics are commonly used in applications where durability, easy maintenance, and resistance to environmental factors are crucial, such as in outdoor gear, industrial workwear, and certain types of clothing. The Teflon coating also provides additional benefits like soil release, which helps in the removal of dirt and grime, and anti-microbial properties that can inhibit the growth of bacteria and fungi.
