Abstracts

The oil and gas electric desalination and dehydration equipment is an integrated equipment specially used in the oil and gas industry. It uses electrolysis and electric field force to remove water and salt from the oil and gas mixture. This equipment can effectively separate water and salt, improve the quality and storage stability of oil and gas, and is widely used in the initial treatment and transportation process of oil fields. TEG dehydration skid is commonly used in natural gas processing stations, gas gathering stations, single well test production sites of onshore condensate gas fields, and wellhead platforms of offshore condensate gas fields. The TEG dehydration process belongs to the solvent absorption method and is one of the most commonly used methods in the natural gas industry. It uses the absorption principle and uses glycol substances as absorbents to fully contact with natural gas, so that water is transferred to the solvent to achieve the purpose of dehydration.

The global Teg Dehydration Skid For Natural Gas market size was estimated at USD 480.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
