Report Overview

Tetrabutanone Oximesilane is a chemical compound that can be derived from the reaction of tetrabutanone with hydroxylamine and a silane coupling agent.

Tetrabutanone, also known as 3,3,5,5-tetramethyl-2-cyclohexen-1-one, is a cyclic ketone with a molecular formula of C₁₀H₁₈O. It is an organic compound that is widely used as a solvent, a precursor in the synthesis of various chemicals, and in the production of fragrances. The oxime form of tetrabutanone is created by the addition of hydroxylamine to the carbonyl group, resulting in a compound with a hydroxylamine functional group. The silane coupling agent then reacts with the hydroxylamine group, forming a stable bond and creating a silane-modified tetrabutanone oxime. This compound is used in various applications, including as a coupling agent in composite materials, to improve adhesion between organic and inorganic surfaces, and in the synthesis of specialty chemicals.

In 2024, the global Tetrabutanone Oximesilane market is projected to reach approximately USD xx Million, with expectations to grow at a compound annual growth rate (CAGR) of around xx between 2024 and 2033.
