Report Overview

Tetrasodium Etidronate, also known as Disodium Etidronate or Didronel, is a synthetic bisphosphonate compound primarily used as a medication for treating various bone-related disorders. It functions by inhibiting osteoclast activity, which are cells responsible for breaking down bone tissue. This action helps to slow bone resorption, thereby increasing bone mineral density and reducing the risk of fractures. Tetrasodium Etidronate is commonly prescribed for conditions such as Paget's disease, osteoporosis, and hypercalcemia. Additionally, it is sometimes used in the management of certain types of cancer that have metastasized to the bones. The medication is typically administered orally and can be associated with side effects like gastrointestinal discomfort, although serious side effects are rare.
