Report Overview

Textile Printing Gum, also known as printing paste or adhesive, is a crucial component in the textile printing industry. It is a viscous, water-soluble substance used to bind and transfer pigments or dyes onto textile materials, such as fabrics, during the printing process. The primary function of the gum is to act as a carrier for the color, ensuring that the dye adheres evenly and consistently to the fabric surface. Textile Printing Gum is formulated to have specific properties, such as high viscosity and adhesion, to facilitate the printing process and achieve the desired color intensity and pattern definition. It is typically made from natural or synthetic polymers and is designed to be compatible with various types of dyes and printing techniques, including screen printing, roller printing, and digital printing.
