The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Thermal Imaging Camera for Smartphone competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. In 2024, global thermal imaging camera for smartphone production reached approximately 1,006.8 K units, with an average global market price of around US\$ 442.6 per unit. A Thermal Imaging Camera for smartphones is a compact device or attachment that allows a smartphone to detect and capture infrared radiation, converting it into a visible image. These cameras detect heat emitted by objects and display temperature differences, allowing users to "see" heat patterns even in complete darkness or through obstacles like smoke. Often used in fields such as building inspections, electrical diagnostics, wildlife observation, and security, thermal imaging cameras are valuable tools for identifying heat-related issues, spotting animals, or enhancing situational awareness. They connect to smartphones via USB, wireless, or built-in technologies. The value chain of the thermal imaging camera for smartphone industry covers upstream, midstream, and downstream sectors, each ensuring the integration of infrared imaging technology into consumer mobile devices. Upstream consists of suppliers of critical raw materials and components such as infrared sensors, microbolometers, optical lenses, semiconductors, and smartphone-compatible housings, typically provided by specialized sensor manufacturers and optics companies. The midstream sector involves device designers, OEMs, and contract manufacturers that develop thermal imaging camera modules or standalone clip-on accessories, integrating image processing software, calibration systems, and smartphone connectivity features to ensure accuracy and user-friendly performance. Downstream includes distribution and sales channels such as e-commerce platforms, retail electronics stores, mobile carriers, and industrial equipment distributors as well as

applications across diverse markets, including building diagnostics, electrical inspection, firefighting, veterinary and medical use, security, and outdoor activities. This value chain links advanced infrared technology to practical smartphone-based solutions that make thermal imaging more affordable and widely accessible. The single-line production capacity of thermal imaging camera for smartphone is 78 to 85 K units per year, the average gross profit margin was 48.5%.

The global Thermal Imaging Camera for Smartphone market size was estimated at USD 446.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
