### Report Overview

Thermal insulation sunscreen film is a specialized material applied to glass surfaces, primarily windows, designed to block or reflect solar heat and ultraviolet (UV) radiation while maintaining visibility and natural light transmission. These films typically consist of multiple layers, including UV-absorbing compounds, metallic or ceramic coatings, and adhesive backings, which work together to reduce heat transfer, minimize glare, and protect against fading of interior furnishings. They are widely used in residential, commercial, and automotive applications to improve energy efficiency, enhance comfort, and provide privacy without obstructing views. The effectiveness of these films is measured by metrics such as solar heat gain coefficient (SHGC), visible light transmittance (VLT), and UV rejection rates, making them a practical solution for climate control and sun protection in various environments.
