Abstracts

Thermoelectric recirculating chillers (also called Peltier chillers) have many benefits and advantages when compared to compressor-based chillers. Thermoelectric chillers utilize multiple arrays of thermoelectric chips (TECs) coupled with heat sinks, fans and liquid heat exchangers to provide extremely accurate thermal control of the outgoing fluid. As TECs also have the ability to heat as well as cool, thermoelectric chillers provide extremely fast and accurate temperature control and stability and can reach a temperature stability of just a few 0.01°C with a stable heat load. Compressor chillers utilize compressors with refrigerant, condensers and evaporators to provide bulk cooling and typically resistive heaters in order to counteract the on-off cooling of compressors.

The global Thermoelectric Recirculating Chiller market size was estimated at USD 135.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
