Abstracts

A thermoset injection molding machine is specialized equipment designed for molding thermosetting plastics. Unlike thermoplastics, thermosetting plastics do not re-melt after heating; instead, they harden through chemical cross-linking to form a stable structure. Consequently, thermoset injection molding machines are engineered to handle high temperatures and rapid curing processes. These machines are commonly used to produce components with high heat resistance and strength, widely applied in electrical equipment, automotive parts, and industrial tools.

The global Thermoset Injection Molding Machine market size was estimated at USD 1850.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.85% during the forecast period.
