Abstracts

Thin Film Pulsed Laser Deposition (PLD) is a specialized technique used to create thin films of materials on various substrates through the use of high-energy laser pulses. In this process, a focused laser beam is directed onto a target material, which is typically a solid source of the desired film material. The intense energy from the laser pulse causes rapid vaporization and ablation of the target, resulting in the ejection of atoms, ions, or molecules into the gas phase.

The global Thin Film Pulsed Laser Deposition Pld market size was estimated at USD 285.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 8.75% during the forecast period.
