Abstracts

Third-party medical testing services, also known as independent medical laboratories (ICL), refer to medical tests performed by medical testing service providers independent of medical institutions (such as hospitals, community health service centers, physical examination centers, disease control centers, etc.) and patients in the medical diagnostic service industry. These laboratories, with the permission of the health administrative department, have independent legal person status, specialize in clinical testing or pathological diagnosis and services, and can assume independent responsibilities. They undertake the testing tasks of medical institutions and use advanced testing technologies and equipment to provide medical institutions with fast, accurate and reliable test results, thereby helping medical institutions to better diagnose and treat. According to different testing items, third-party medical testing services can be divided into two categories: general testing (general testing) and special testing (special testing). The market prospects for third-party medical testing services are broad. Driven by multiple factors such as the aging of the population, the increase in the demand for chronic disease prevention and control, the promotion of the hierarchical diagnosis and treatment system, and technological progress, the industry will maintain a sustained growth trend.
