### Report Overview

A three-dimensional sieve shaker is a laboratory instrument used in the aggregate, mining, and recycling industries to determine the particle size distribution of materials. It features a motorized shaking mechanism that vibrates three dimensionally to ensure thorough and uniform sorting of the material through a set of graduated sieves. As the material is shaken, smaller particles pass through the sieve mesh while larger particles remain on top. This process allows for the precise analysis of the material's gradation, which is crucial in quality control, process optimization, and compliance with industry standards.
