Abstracts

Three dimensional stereo microscopes provide a 3-dimensional or 'stereo' image when looking through the microscope. The zoom feature on the stereo zoom microscope provides a range of viewing possibilities, and is the single feature that is most useful when selecting a stereoscope. The zoom knob on a stereo microscope provides magnification within a large range (for example, 0.7x - 4.5x) and ultimately allows the ability to view every single magnification (7x, 8x, 9x, etc.) when zooming in on the microscopy sample. Stereo zoom microscopes allow quick zoom from low to high magnification. Using a stereo zoom microscope makes it simple to view a sample in the entire field of view, then focus and zoom in on a particular part of interest.

The global Three Dimensional Stereo Microscope market size was estimated at USD 725.4 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.85% during the forecast period.
