Report Overview

A Thrust Sliding Bearing is a type of mechanical bearing designed to support and guide rotating or linearly moving components, while minimizing friction and wear. It is specifically engineered to handle axial loads, which are forces acting along the axis of the shaft. The bearing consists of a bearing surface, often made from materials like bronze or babbitt metal, which is lubricated to reduce friction and facilitate smooth operation. Thrust sliding bearings are commonly used in applications where high loads and low speeds are present, such as in turbines, pumps, and other heavy machinery. They are known for their ability to distribute loads evenly, maintain alignment, and provide a long service life with proper maintenance and lubrication.
