Abstracts

The time-slot switching digital switch is a digital switch based on time-division multiplexing technology. It divides the input signal into fixed-length time slots, and exchanges and transmits them according to the time slots to realize the communication connection between different users. The working principle of the time slot switching digital switch is as follows: 1. Time slot division: The input signal is divided into time slots of fixed length, and each time slot corresponds to a user's data or signal. 2. Time slot allocation: According to user needs and communication requirements, the time slot switching digital switch allocates the time slot of the input signal to the corresponding output port or user. 3. Time slot exchange: According to the time slot allocation table, the time slot exchange digital switch exchanges the time slot of the input signal according to the specified route, and transmits it to the corresponding output port or user. 4. Time slot multiplexing: At the output port or user, the time slot switching digital switch recombines the received time slots into a complete signal to realize the communication connection. The time slot switching digital switch has the following characteristics: 1. Flexibility: Time slot exchange digital switches can dynamically allocate and exchange time slots according to user needs and communication requirements, and realize flexible communication connections between multiple users. 2. Efficiency: Time-slot switching digital switches adopt time-division multiplexing technology, which can complete the switching and transmission of a large number of time slots in a short time, improving communication efficiency. 3. Reliability: The time slot switching digital switch has good fault tolerance and redundancy design, which can ensure the reliability and stability of communication. Time slot switching digital switches are widely used in traditional telecommunication networks and data communication networks to realize telephone communication, data transmission and multimedia communication. It is an important form of digital switching technology, providing users with high-quality, high-efficiency communication services.
