Report Overview

A Timestamp Server is a key component in many blockchain and cryptographic systems. Its main purpose is to generate a timestamp that proves a specific piece of data or transaction existed at a particular moment in time. It works by taking the hash of the data (like a document or transaction) and placing it in a chain of blocks, each with its own timestamp. Each block references the previous one, creating a chronological record that prevents alteration or backdating. This process ensures data integrity and provides a verifiable timeline, crucial for trust in systems like Bitcoin and other distributed ledgers.
