Abstracts

The main material of titanium-coated saw blade milling cutter is high-speed steel, which itself has strong wear resistance and heat resistance. The surface is covered with a layer of titanium alloy coating, which is formed by the titanium plating process and is the key feature of titanium-coated saw blade milling cutter. Titanium coating makes the surface of the saw blade have higher hardness, improves the wear resistance of the saw blade and prolongs its service life. The coating also gives the saw blade excellent heat resistance and can maintain stable cutting performance in high temperature environment. The titanium coating has the characteristic of not easy to stick to the cutting, which effectively avoids the adhesion of chips during the cutting process, reduces the cutting resistance and the generation of cutting heat. Titanium-coated saw blade milling cutters are suitable for processing various materials, including aluminum alloy, copper, iron, stainless steel, alloy steel, etc.

The global Titanium Plated Saw Blade Milling Cutter market size was estimated at USD 350.25 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.80% during the forecast period.
