Report Overview

A Toilet Occupancy Sensor is a technological device designed to detect the presence of an individual in a restroom stall or toilet cubicle. It operates by employing various sensing technologies such as infrared, ultrasonic, or capacitive sensors to identify when a stall is occupied. Once activated, the sensor can trigger a variety of responses, including illuminating an "occupied" indicator light outside the stall to inform others that the facility is in use. This product is particularly useful in public restrooms, commercial buildings, and other high-traffic areas to enhance privacy, efficiency, and hygiene.
