### Report Overview

Tool steel powder is a specialized metal powder primarily used in additive manufacturing (3D printing) and powder metallurgy to produce high-performance components with superior hardness, wear resistance, and toughness. It consists of finely ground particles of tool steel alloys, such as AISI D2, H13, or M2, which are known for their ability to retain strength at high temperatures and resist deformation. The powder is engineered for precise particle size distribution and flowability, making it ideal for selective laser melting (SLM), electron beam melting (EBM), and metal injection molding (MIM). Applications span industries like aerospace, automotive, medical, and tooling, where complex geometries and durable parts are critical. The market is driven by growing demand for customized, lightweight components and advancements in powder production technologies, though high material costs and stringent quality requirements pose challenges.
