Report Overview

Topical Recombinant Thrombin is a biotechnological product designed for the management of bleeding in surgical procedures. It is a genetically engineered version of human thrombin, a protein that plays a crucial role in the blood clotting process. This product is applied directly to the site of bleeding, where it rapidly converts fibrinogen into fibrin, which forms the basis of a blood clot. The recombinant nature of the thrombin means it is produced using modern biotechnology techniques, such as genetic engineering in a laboratory setting, rather than being extracted from human or animal sources. This approach helps to minimize the risk of disease transmission and ensures a consistent and reliable supply of the product. Topical Recombinant Thrombin is particularly valuable in surgeries where achieving hemostasis is challenging, such as in neurosurgery, cardiovascular surgery, or orthopedic procedures, and it is used as an adjunct to standard surgical hemostatic techniques.
