Abstracts

A Touchless Elevator Call Solution is an intelligent system that integrates IoT, AI, and sensing technologies to enable elevator calls and floor selection without physical contact with buttons. It supports multiple interaction methods such as mobile app/mini-program control, Bluetooth pairing, gesture recognition, AI voice commands, and face recognition, allowing users to remotely call elevators or automatically activate target floors. Designed with non-intrusive installation to adapt to different elevator brands and models, it reduces cross-infection risks while enhancing travel convenience, catering to scenarios like commercial buildings, hospitals, communities, and smart parks. Demand for this solution is growing steadily driven by ongoing public health awareness, the need for epidemic prevention in high-traffic public spaces, and the digital transformation of smart buildings and communities. It addresses pain points such as hygiene risks from shared button contact and inadequate accessibility for special groups. Key opportunities lie in developing cost-effective retrofitting kits for existing elevators and integrated solutions for new construction projects, expanding compatibility with robots (for delivery, cleaning) to meet smart building needs. Additionally, offering tiered services (basic contactless control vs. integrated smart management) and emphasizing easy installation and low maintenance can tap into market potential across commercial, medical, and residential sectors.

The global Touchless Elevator Call Solution market size was estimated at USD 875.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.20% during the forecast period.
