Report Overview

A Towed Air Start Unit (TASU) is a specialized piece of equipment used in the aviation industry to provide an external source of compressed air for starting the engines of large aircraft, particularly those that require high volumes of air for ignition. This mobile unit is typically mounted on a trailer or towed by a vehicle and is equipped with a powerful air compressor and a high-pressure air storage system. The TASU connects to the aircraft's engine through hoses, supplying the necessary air pressure to initiate combustion and start the engine. This is particularly useful for aircraft on the ground or in situations where the aircraft's own air start system is inoperative or insufficient. The TASU ensures that aircraft can be safely and efficiently started, reducing downtime and enhancing operational readiness.
