Abstracts

Traditional Liquid Alkaline Electrolyser consists of an electrolyzer, an anode, a cathode and a power supply. In an electrolyzer, the anode and cathode are connected to the positive and negative terminals of the power source, respectively, while the electrolyte is placed in the electrolyzer. When an electric current is passed through the electrolyzer, the water molecules in the aqueous solution are broken down, producing hydrogen gas to be released at the cathode and oxygen gas to be released at the anode.

The global Traditional Liquid Alkaline Electrolyser market size was estimated at USD 126.45 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 21.35% during the forecast period.
