Report Overview

Trans-2-Butene, also known as trans-butene or trans-2-butylene, is an organic compound belonging to the alkene class. It is a colorless, flammable gas with a slight odor. The chemical formula for trans-2-butene is C_4H_8 , indicating that it consists of four carbon atoms and eight hydrogen atoms. In its molecular structure, the carbon atoms are arranged in a chain, with the second and third carbon atoms connected by a double bond. The double bond causes the molecule to have a trans configuration, meaning that the hydrogen atoms on the double-bonded carbons are positioned on opposite sides of the molecule. Trans-2-butene is an isomer of cis-2-butene and 1-butene, with the primary difference being the arrangement of the hydrogen atoms around the double bond. This compound is commonly used as a feedstock in the petrochemical industry for the production of various chemicals and polymers, such as synthetic rubber and plastics.
