Report Overview

Trans-4-(trans-4-ethylcyclohexyl)cyclohexyl methanol is an organic compound characterized by its unique molecular structure. It features a cyclohexyl group (a six-membered ring with two carbons substituted by hydrogen atoms) at both ends of the molecule. The first cyclohexyl group is directly attached to a methanol group (a hydroxyl group attached to a methyl group), while the second cyclohexyl group is attached to the first through a carbon-carbon bond. Notably, both cyclohexyl groups are in the trans configuration, meaning that the substituents on the second carbon of each cyclohexyl ring are positioned on opposite sides of the ring. This compound is synthesized for various applications in the chemical industry, such as a building block for more complex organic molecules or as an intermediate in the production of specialty chemicals.
