Abstracts

TOTM is formed by esterification of isooctanol with trimeric anhydride. TOTM has low volatility, low mobility, good electronic resistance, and heat resistance. TOTM is used on wires and cables and can pass the UL62 105 ? inspection in the United States. In terms of PVC plastic paste, under the same flexibility conditions, the viscosity of TOTM based plastic paste is lower than that of DIDP. In terms of stability, compared with DEHP, TOTM has fewer changes in its plastic paste, indicating greater stability. TOTM heat resistant and durable plasticizer, suitable for various resins such as polyvinyl chloride, vinyl chloride copolymer, nitrate cellulose, polymethyl methacrylate, etc. This product has good performance in volatilization, water extraction resistance, migration resistance, low temperature resistance, and electrical properties. Its durability is comparable to that of polymer plasticizers, while its plasticizing efficiency and processing performance are similar to those of phthalate plasticizers. It also has some characteristics of monomer and polymer plasticizers. Mainly used for heat-resistant cable materials (105 ? level), plates, sheets, sealing gaskets and other products that require heat resistance and durability.
