Abstracts

The molecular formula of triacetoneamine is $C_9H_{17}NO$, which has a white to light yellow solid form. Its molecular structure includes a pyridine ring, with four methyl groups attached to different carbon atoms. This structure gives triacetoneamine special properties in chemical reactions and biological activities. Triacetoneamine (also known as 2,2,6,6-tetramethylpiperidine or triacetoneamine) plays a core role in the production of hindered amine light stabilizers and is a key raw material for the development and manufacture of this type of light stabilizer. Based on triacetoneamine, a variety of hindered amine light stabilizer intermediates and light stabilizer products can be synthesized, including tetramethyl piperidol, penta piperidol, and light stabilizer 770. These light stabilizers have become mainstream choices in the market due to their excellent performance and rapid development. Light stabilizer is a chemical substance that can inhibit or weaken the degradation effect of light on polymer materials, improve the light resistance of polymer materials, and can usually be used in conjunction with antioxidants to better inhibit the photocatalytic degradation of polymer materials. It belongs to a category of polymer material additives. As a key component in expressing the properties of polymer materials, the polymer additive industry is in the middle of the industrial chain, with downstream industries such as synthetic fibers and adhesives. With the steady growth of the global economy and the continuous expansion of material application fields, the demand for polymer materials is strong, and the market size is steadily growing, which has also opened up broad development space for the polymer material additive industry. In the global light stabilizer market, hindered amine light stabilizers occupy the largest market share, followed by ultraviolet absorbers and quenchers. According to statistics, in 2020, the sales scale of hindered amine light stabilizers, ultraviolet absorbers, and quenchers in the global light stabilizer market was US\$ 843 million, US\$ 240 million, and US\$ 113 million, respectively, with proportions of 70.50%, 20.05%, and 9.45%. China is in a leading position in the production and

consumption of light stabilizers worldwide. In terms of sales scale, China's total market share of light stabilizers in the Asia Pacific region was 55.9% in 2020, with a market size of US\$ 224 million, making it one of the fastest-growing markets for light stabilizers.

The global Triacetoneamine market size was estimated at USD 263.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 5.50% during the forecast period.
