Report Overview

Tributyltin Chloride, also known as TBT or $(\text{CH}_3\text{CH}_2\text{CH}_2\text{CH}_2)_3\text{SnCl}$, is an organotin compound that is widely used as a biocide in various applications. It is a colorless, oily liquid with a distinctive odor. TBT is primarily used as an antifouling agent in marine paints to prevent the growth of algae, barnacles, and other organisms on the hulls of ships and boats, thereby reducing drag and improving fuel efficiency. Additionally, it has been employed as a wood preservative and in agricultural applications to control pests and fungi. However, due to its high toxicity to aquatic life and its potential to bioaccumulate in the environment, the use of tributyltin compounds has been restricted or banned in many countries to protect marine ecosystems and human health.
