Abstracts

? - tricalcium phosphate (? - TCP) is a biodegradable or bioabsorbing bioactive ceramic material. When implanted in the human body, the degraded Ca and P enter the living circulatory system to form new bone. Therefore, it is an ideal hard tissue substitute material. ? - TCP is a biodegradable bioceramic with a chemical formula of $\text{Ca}_3(\text{PO}_4)_2$ and a Ca/P ratio of 1.5. ? - TCP has a faster degradation rate and higher solubility than hydroxyapatite. It has a high absorption rate and is widely used to improve biocompatibility. Tricalcium phosphate has good biocompatibility, bioactivity, and biodegradability, making it an ideal material for repairing and replacing human hard tissues. It has been closely studied in the field of biomedical engineering. A special form of tricalcium phosphate commonly used in medicine is beta tricalcium phosphate. Good biocompatibility, biological activity, and biodegradability make it an ideal material for repairing and replacing human hard tissues. As an artificial bone material, it has been widely used in orthopedic clinical practice, plastic and cosmetic surgery, dentistry, repairing bone defects and fusion caused by trauma, tumors, inflammation, bone diseases, etc. It can be added as a safe nutritional enhancer in food to enhance calcium intake, and can also be used to prevent or treat symptoms of calcium deficiency. It can also be used as an anti caking agent, pH regulator, buffering agent, etc. in food.

The global Tricalcium Phosphate Bioceramics market size was estimated at USD 1250.45 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.85% during the forecast period.
