Report Overview

Trimethoprim API, or Trimethoprim Active Pharmaceutical Ingredient, refers to the pure chemical compound used as the main ingredient in the production of various pharmaceutical formulations, such as antibiotics. Trimethoprim is a synthetic antibacterial agent that belongs to the class of drugs known as dihydrofolate reductase inhibitors. It works by inhibiting the enzyme dihydrofolate reductase, which is essential for bacterial DNA synthesis, thereby preventing bacterial growth and multiplication. The API is utilized in the manufacturing of drugs that treat a wide range of bacterial infections, including urinary tract infections, respiratory tract infections, and certain sexually transmitted diseases. Trimethoprim is often combined with a sulfonamide, such as sulfamethoxazole, to create a synergistic effect, enhancing its bactericidal properties. The API must meet strict quality and purity standards to ensure the safety and efficacy of the final pharmaceutical product.
