Abstracts

A TRIAC (Triode for Alternating Current) semiconductor switch is a device that can control the flow of alternating current (AC) in electrical circuits. It is a type of electronic switch that allows the current to flow in both directions, making it suitable for AC power control applications. The TRIAC is composed of two thyristors connected in inverse parallel, and it can be triggered to conduct current by a gate signal. This makes it useful for controlling the power output in applications such as dimmers, motor speed control, and temperature regulation. The TRIAC's ability to switch AC power in a controlled manner makes it a versatile component in modern electronics.

The global Triode Ac Triac Semiconductor Switch market size was estimated at USD 1250.4 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 6.45% during the forecast period.
