TSV silicon-based adapter board, that is, a silicon-based adapter board using Through Silicon Vias (TSV) technology. Through Silicon Via technology is an advanced packaging process that achieves three-dimensional interconnection between chips and chips, and between chips and substrates by directly making vertical vias on the silicon substrate. This technology can greatly reduce the system volume, reduce the system quality, and reduce signal delay and loss. As an interposer, the TSV silicon-based adapter board can achieve high-density pin redistribution and is suitable for applications in multi-functional chip integration, three-dimensional packaging and other fields. Market driving factors The driving factors of the TSV silicon-based adapter board market mainly include the following points: Technological progress and innovation: With the continuous development of semiconductor technology, the integration and performance requirements of chips are constantly improving. As an effective way to achieve high-density assembly, TSV technology has a growing application demand. At the same time, the continuous innovation of technology has also promoted the application expansion of TSV silicon-based adapter boards in more fields. Market demand growth: In the fields of high-performance computing, data centers, consumer electronics, etc., the demand for high-performance and high-integration chips is growing. As a key technology for realizing three-dimensional stacking and interconnection of chips, the market demand for TSV silicon-based adapter boards has grown accordingly. Policy support and promotion: Governments of various countries have continuously increased their support for the semiconductor industry and introduced a series of policy measures to promote the development and innovation of the semiconductor industry. These policies provide a strong guarantee for the development of the TSV silicon-based adapter board market. Coordinated development of the industrial chain: The development of the TSV silicon-based adapter board industry is inseparable from the coordinated development of the entire semiconductor industry chain. With the

continuous improvement and maturity of the semiconductor industry chain, the production cost of TSV silicon-based adapter boards has gradually decreased, and the market competitiveness has continued to improve.
