Report Overview

A Tubular Membrane Module (Inside Out) is a type of membrane filtration system designed for various industrial and environmental applications. This module is characterized by its unique structure, where the membrane is positioned on the inside of a tubular support, with the feed water flowing on the outside of the membrane. This configuration allows for efficient filtration and separation of particles, bacteria, and other contaminants from the feed water. The Inside Out design facilitates easier cleaning and maintenance, as the membrane surface is more accessible for chemical or physical cleaning processes. This design is particularly advantageous in applications where high flux rates and resistance to fouling are required, such as in water treatment, wastewater recycling, and industrial process streams. The Tubular Membrane Module (Inside Out) offers benefits such as reduced energy consumption, extended membrane life, and improved overall process efficiency.
