### Report Overview

A Tubular Spinal Retractor is a specialized surgical instrument designed for use in spinal surgeries. It is typically made of a flexible, tubular material that allows for minimally invasive access to the spinal column. The retractor is inserted through a small incision in the patient's back, and its tubular shape helps to create a protective corridor around the surgical site, minimizing damage to surrounding tissues. The retractor's design also facilitates the visualization and manipulation of the spinal structures, such as the vertebrae and intervertebral discs, during procedures like decompression, fusion, or implantation of spinal hardware. The use of a tubular spinal retractor can lead to reduced postoperative pain, faster recovery times, and improved cosmesis compared to traditional open surgical approaches.
