Report Overview

A Tunnel Type Metal Detector is a specialized security device designed to detect metallic objects within a controlled environment. It typically consists of a long, tunnel-shaped structure through which items or individuals pass for screening. This type of metal detector operates on the principle of inductance, where a magnetic field is generated within the tunnel, and any metallic object passing through disturbs this field, triggering an alarm. It is commonly used in security checkpoints, such as airports, prisons, and factories, to ensure safety by detecting concealed weapons, contraband, or other metallic items. The Tunnel Type Metal Detector is known for its high sensitivity and ability to scan large volumes of items or people efficiently, making it a crucial tool in maintaining security and preventing the introduction of dangerous or prohibited items into secure areas.
