## Abstracts

A turbocharger is a turbine-driven forced induction device that increases an internal combustion engine's efficiency and power output by forcing extra compressed air into the combustion chamber. This improvement over a naturally aspirated engine's power output is due to the fact that the compressor can force more air and proportionately more fuel into the combustion chamber than atmospheric pressure (and for that matter, ram air intakes) alone.

The global Turbocharger For Commercial Vehicles market size was estimated at USD 5798.42 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.35% during the forecast period.
