Report Overview

Two-component composite JS waterproof coating is an advanced waterproofing material composed of a liquid component (typically a polymer emulsion) and a powdered component (often cement-based additives), which are mixed before application to form a flexible, durable, and seamless waterproof membrane. This type of coating combines the elasticity of polymers with the strength and adhesion of cement, making it suitable for a wide range of applications, including basements, bathrooms, swimming pools, and roofs. Its key advantages include excellent waterproofing performance, crack-bridging ability, strong bonding to substrates, and resistance to water pressure and weathering. The product is also environmentally friendly, with low VOC emissions, and can be applied on both rigid and flexible surfaces, making it a preferred choice in modern construction and renovation projects. The market for this product is driven by increasing demand for high-performance waterproofing solutions in residential, commercial, and infrastructure development, particularly in regions with high humidity or heavy rainfall.
