## Abstracts

A two tier trolley is a type of shopping cart that is designed with two separate levels or decks for carrying groceries or other items. This design allows shoppers to better organize their purchases, with larger or heavier items placed on the lower level and smaller or lighter items on the upper level. The two tier trolley may also help prevent damage to delicate items by keeping them separate from heavier products. These trolleys are often found in supermarkets and grocery stores and are available in various sizes and designs to accommodate different customer needs. Some models may have a fixed second tier, while others may have a removable or foldable upper deck for added flexibility. Two tier trolleys can be particularly useful during large shopping trips when customers need to purchase a significant amount of items, as they provide more storage space without increasing the difficulty of maneuverability like a traditional single-level cart might. The two - tier trolley industry is currently experiencing several notable trends. Firstly, there is a growing emphasis on customization. Different industries and users have diverse requirements for trolleys. For example, in the office environment, some may prefer trolleys with file - specific storage compartments; in workshops, trolleys with tool - hanging mechanisms might be more popular. Manufacturers are thus increasingly offering customized solutions to meet these specific needs, such as adjustable shelves, built - in dividers, or trolleys in different colors and materials. Secondly, there is a trend towards enhanced functionality. Modern two - tier trolleys are being equipped with more features to improve their usability and efficiency. This includes the addition of high - quality wheels that offer better mobility and stability, enabling smooth movement across various surfaces and in tight spaces. Some trolleys may also come with brakes for easy stopping and securing in place. Additionally, features like shock - absorption systems are being incorporated to protect the items being transported, especially in applications where delicate or valuable items are involved. Thirdly, sustainability is becoming a key consideration. With the increasing

global focus on environmental protection, manufacturers are using more eco-friendly materials to produce two-tier trolleys. Recyclable metals and plastics are being favored, reducing the environmental impact of trolley production and disposal. Moreover, efforts are being made to improve the durability and lifespan of trolleys, which not only reduces waste but also provides better value for customers in the long term.

The global Two Tier Trolley market size was estimated at USD 193.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 4.20% during the forecast period.
