Report Overview

The Type B Liquid-Tight Flexible Non-Metallic Conduit is a specialized protective tubing designed for electrical wiring in environments where moisture, dust, oils, and other corrosive elements pose a risk. It features a flexible, non-metallic construction—typically made from PVC or other durable polymers—combined with a liquid-tight outer jacket to prevent fluid ingress. This conduit is commonly used in industrial settings, such as manufacturing plants, food processing facilities, and outdoor applications, where rigid conduits are impractical. Its flexibility allows for easy installation in tight or complex routing scenarios while maintaining resistance to abrasion, chemicals, and UV exposure. The Type B classification ensures compliance with electrical safety standards, distinguishing it from other conduit types by its specific resistance to liquid penetration and mechanical stress. Demand for this product is driven by stringent safety regulations, the expansion of industrial automation, and the need for reliable wiring protection in harsh conditions.
