Report Overview

Ultra-fine ATH, or Ultra-fine Aluminum Trihydrate, is a high-quality, finely ground form of aluminum hydroxide. This product is derived from the natural mineral bauxite and is processed to achieve a very fine particle size. It is widely used in various industries due to its unique properties, such as its high heat resistance, flame retardancy, and smoke suppression capabilities. Ultra-fine ATH is commonly employed as a flame retardant in plastics, rubber, and coatings, as well as in the production of ceramics and refractory materials. Its fine particle size allows for better dispersion in various matrices, enhancing the performance of the final product. Additionally, it is valued for its ability to absorb water and neutralize acids, making it a component in certain chemical applications. The ultra-fine grade of ATH is particularly effective in applications where a high level of performance and precision is required.
