Abstracts

Ultra-high vacuum diffusion pump silicone oil is a lubricating oil used in ultra-high vacuum environments. It is usually made of polydimethylsiloxane (PDMS), which has low evaporation and high stability, and can provide good lubrication properties at very low pressures. Ultra-high vacuum diffusion pump silicone oil is mainly used in the working environment of diffusion pumps, which are equipment used to generate high vacuum. In diffusion pumps, silicone oil is used as a lubricant to reduce friction and wear while maintaining sealing performance. Due to the thin gas in ultra-high vacuum environments, traditional lubricating oils tend to evaporate under high temperatures and low pressures, while silicone oils have a lower evaporation rate and can maintain stable lubrication effects under extreme conditions. Ultra-high vacuum diffusion pump silicone oil has excellent high temperature resistance and chemical stability, and can be used in high temperature and corrosive gas environments for a long time. It also has low toxicity and volatility, making it relatively safe for systems and operators. This makes ultra-high vacuum diffusion pump silicone oil a commonly used lubricating material in ultra-high vacuum equipment.

The global Ultra High Vacuum Diffusion Pump Silicone Oil market size was estimated at USD 42.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 3.85% during the forecast period.
