Abstracts

The 2025 U.S. tariff policies introduce profound uncertainty into the global economic landscape. This report critically examines the implications of recent tariff adjustments and international strategic countermeasures on Ultra Short Throw Interactive Projector competitive dynamics, regional economic interdependencies, and supply chain reconfigurations. Ultra Short Throw Interactive Projector is a projection device based on ultra-short throw optical technology (with a throw ratio typically 0.4:1, enabling large-screen projection at close distances). By integrating touch-sensitive sensing or stylus-based interaction features (e.g., infrared/camera positioning, pressure recognition), it allows users to directly perform operations such as clicking, writing, and dragging on the projected screen, achieving human-machine interaction. Its core feature combines large-screen display with real-time interactivity, primarily applied in educational, business presentation, and collaborative design scenarios. It relies on physical contact or specialized tools (e.g., stylus) rather than being a one-way interactive device controlled solely by voice commands. The market drivers for the ultra short throw interactive projector industry primarily stem from the growing demand for interactive display technology in education, business, and home entertainment sectors. In the educational field, schools require more advanced teaching tools to enhance student learning experiences, making interactive projectors an ideal choice due to their large screen displays, high interactivity, and flexibility. In business settings, companies need more efficient and intuitive meeting and presentation solutions, which these projectors fulfill well. Furthermore, with the popularization of smart homes and home theaters, consumer interest in premium home entertainment devices is increasing, driving the growth of this industry. Technological advancements are also key drivers, including higher resolutions, brighter light sources, and smarter interaction features, all of which improve product performance and further expand market appeal. Looking ahead, over the next few years, the ultra short throw interactive projector industry will move towards

greater intelligence, portability, and integration. With the advancement of artificial intelligence and Internet of Things technologies, future projectors will be able to better connect seamlessly with users' other smart devices and provide a more personalized user experience. Meanwhile, as ultra-short throw technology continues to improve, devices will become more compact, enhancing their portability and allowing users to project anywhere at any time. Additionally, under the influence of green environmental concepts, low-power consumption and long-life light source technologies will become a focus for manufacturers' R&D efforts. At the same time, with the gradual expansion of emerging markets and price reductions, it is expected that ultra short throw interactive projectors will achieve wider global adoption.

The global Ultra Short Throw Interactive Projector market size was estimated at USD 1405.0 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 15.30% during the forecast period.
