Report Overview

Ultra-thick mica plate refers to a high-performance insulating material made from natural or synthetic mica, processed into rigid sheets with exceptional thickness (typically exceeding 3mm). Known for its superior thermal stability, electrical insulation, and mechanical strength, it is widely used in high-temperature applications such as furnace linings, electrical equipment, and aerospace components. The material's resistance to extreme heat (up to 1000°C), dielectric properties, and chemical inertness make it indispensable in industries requiring durable and reliable insulation solutions. Its thickness enhances structural integrity, allowing it to withstand heavy loads and harsh environments, distinguishing it from standard mica sheets used in lighter-duty applications.
