Metallic Reinforced Thermoplastic Pipe is a composite pipe whose pipe wall is made of thermoplastic polymer material combined with metal material. Metal reinforcements are usually embedded into the plastic pipe wall by spiral winding or winding to provide the pipe with higher strength and pressure resistance. This kind of pipeline structure enables metal-reinforced thermoplastic pipes to have the strength and corrosion resistance of metal materials as well as the lightweight and wear resistance of plastic materials. It is suitable for liquid or gas transportation pipeline systems in various industrial fields.
