Report Overview

Umbilical Cord Scissors are medical instruments specifically designed for the purpose of cutting the umbilical cord during childbirth. These scissors are typically characterized by their small, sharp, and curved blades, which are designed to provide precision and control during the cutting process. They are made from high-quality stainless steel or other durable materials to ensure longevity and resistance to corrosion. The handles of umbilical cord scissors are often ergonomically designed for a comfortable grip, facilitating the delicate task of severing the cord without causing harm to the newborn or the mother. These scissors are sterilized and used by medical professionals such as obstetricians, midwives, or nurses, in a controlled and sterile environment to maintain hygiene and prevent infection.
