## Abstracts

Uncooled detectors do not require refrigeration devices and can work at room temperature. They have the advantages of small size, light weight, low power consumption, long life, low cost, and fast startup. Although the sensitivity is not as good as that of cooled infrared focal plane detectors, the performance of uncooled detectors can meet the technical needs of some military equipment and most civilian fields. The photoconductive detector unit is a detector made based on the photoconductive effect. It uses the property of semiconductor materials that the conductivity changes under light to convert the received light signal into an electrical signal output. This detector has the characteristics of fast time response, large output current, small size, and light weight. It shows high sensitivity to various radiations such as X-rays, visible light, and charged particles.

The global Uncooled Infrared Detector Single Element market size was estimated at USD 18.5 million in 2025 and is projected to grow at a compound annual growth rate (CAGR) of 7.25% during the forecast period.
