### Report Overview

Under desk bicycles, also known as pedal exercisers or under-desk ellipticals, are compact, low-impact fitness devices designed to allow users to pedal while seated at a desk or workstation. These devices typically feature a small pedal mechanism that can be placed under a desk or table, enabling users to engage in light physical activity while working, studying, or performing sedentary tasks. They are marketed as a solution to counteract the negative health effects of prolonged sitting, such as poor circulation, muscle stiffness, and reduced calorie expenditure. Under desk bicycles vary in design, with some offering adjustable resistance levels, silent operation, and digital displays to track metrics like time, distance, and calories burned. Their portability and ease of use make them appealing to office workers, remote employees, and individuals seeking to incorporate more movement into their daily routines without disrupting productivity.
