### Report Overview

An Underfloor Air Distribution System for People (UFAD-P) is an innovative and energy-efficient HVAC (Heating, Ventilation, and Air Conditioning) solution designed to optimize air distribution and improve indoor air quality in commercial buildings. This system utilizes the underfloor space, typically occupied by raised flooring or hard floors, to deliver conditioned air directly to the occupied zones, rather than relying on traditional overhead ductwork. By doing so, UFAD-P systems provide a more comfortable and consistent airflow, reducing drafts and temperature stratification. They also offer significant energy savings by minimizing energy loss through ductwork and allowing for reduced fan power requirements. Additionally, UFAD-P systems can enhance flexibility in office layouts, as they eliminate the need for suspended ceilings and allow for easy reconfiguration of spaces. This system is particularly beneficial in open-plan office environments, where it can contribute to increased worker productivity and satisfaction.
